ASSETS · AI

From one email to a campaign

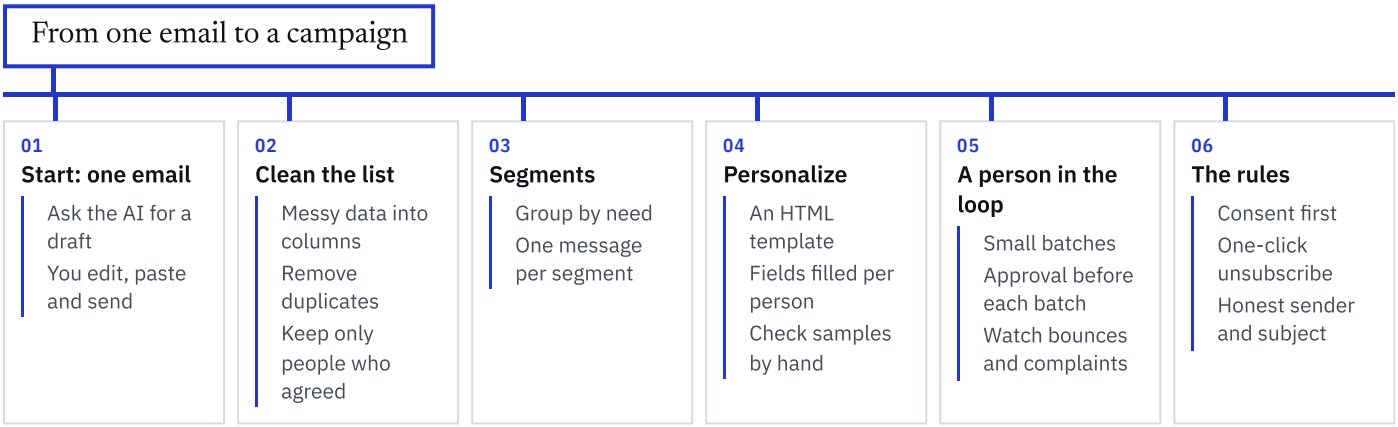

From asking an AI to help with one email you paste and send, to planning a segmented campaign of thousands of personalized emails, sent in batches with a person approving each one.

PLANNED

What you will learn

Most people start by asking an AI to polish one email, which they paste and send. This piece follows the path from there to a full campaign: turning a messy list of contacts into clean segments, writing a message for each segment, personalizing thousands of HTML emails, and sending them in small batches. A person stays in the loop at every step, reviewing samples and approving each batch before it leaves. We cover consent, unsubscribe links and anti-spam law such as CAN-SPAM in the US and the GDPR in the EU, because a message only helps when the person agreed to hear from you.
