Your first GitHub page

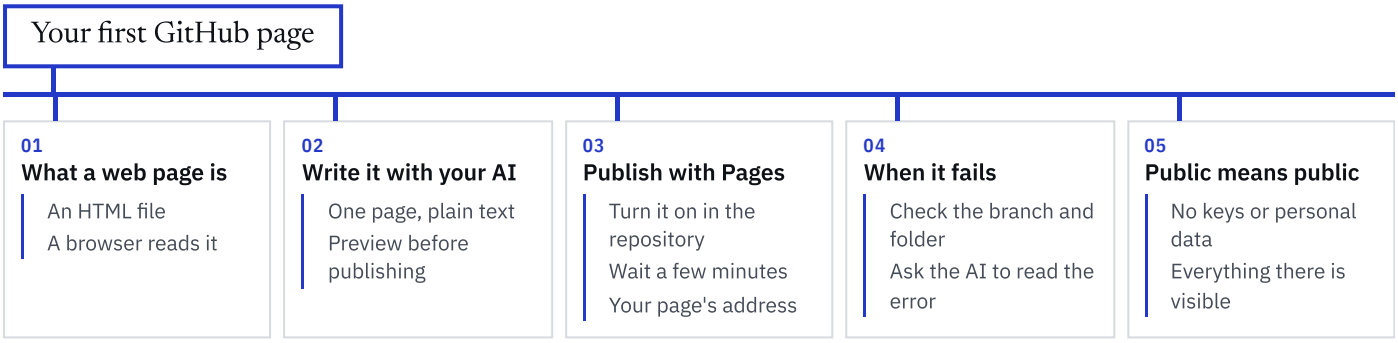

Put a simple web page online for free.

PLANNED

What you will learn

A web page can be one small file. GitHub Pages puts it online for free from a public repository, at an address you can share. In this piece your AI writes a simple page with you, saves it in a repository and turns on Pages, while you check each step. You will learn just enough HTML to read what it wrote, where the page lives, how long it takes to appear, and what to do when it does not. We also cover what should never go on a public page: personal details, keys and private notes, because everything in a public repository can be seen.
