Your first APIs

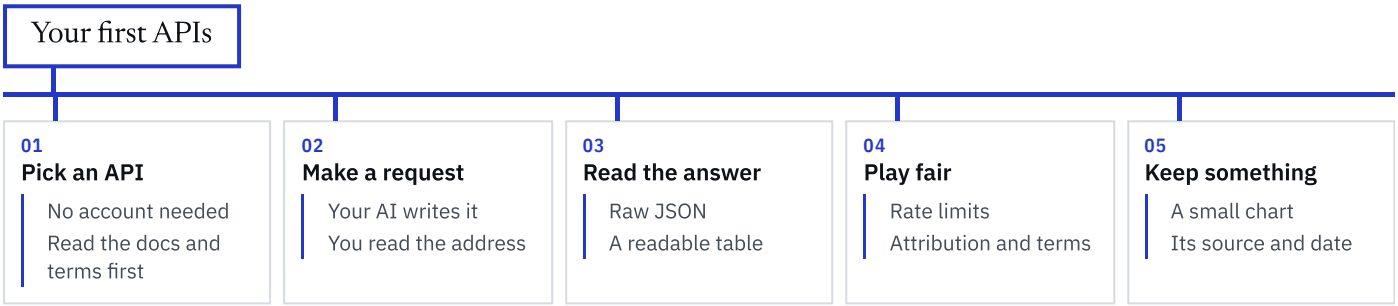

Call a few free public APIs and see what comes back.

PLANNED

What you will learn

The fastest way to understand APIs is to call a few. In this piece your AI makes requests to free public APIs that need no account for personal use, such as a weather forecast and open data from the U.S. Treasury, and shows you the raw answer next to a readable version. You will learn to read what came back, spot an error, respect the limits each service sets, and give credit where the terms ask for it. Then you ask your AI to turn one answer into a small table or chart you can keep, with its source and date.
