Exercise sessions, long form

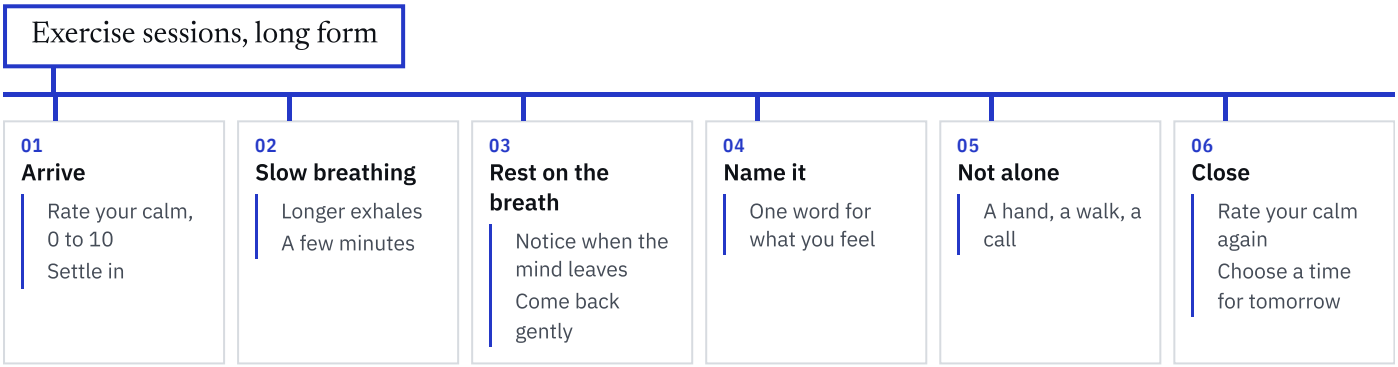

Longer sessions built from the exercise Shorts, to follow along.

PLANNED

What you will learn

Some exercises work better with time than in a 60-second Short. These long sessions join several of them into one guided practice you can follow from start to finish: slow breathing with longer exhales, resting attention on the breath and coming back when the mind wanders, naming what you feel, and letting someone steady you. Each step names the study it comes from and keeps its claim modest. You can pause at any point, and the steps are written out to download. These are practices for calm and do not replace therapy; if anxiety is heavy, talk to a professional.
